

IN THE CLAIMS

Please amend the claims as follows:

1-55 (Cancelled).

56. (Previously Presented) A computer system for forwarding messages from a mobile client comprising:

a host system capable of sending and receiving messages, wherein a message sender's email address is associated with the host system;

a forwarding component operable with the host system that upon receiving a message generated at the mobile client, by a message sender destined for a message recipient, configures the received message, prior to forwarding to the message recipient, such that the received message appears to the message recipient as if the received message originated at the sender's email address associated with the host system, thereby allowing messages generated at either the mobile client or host system to appear to originate at the sender's email address associated with the host system.

57. (Previously Presented) A computer system as claimed in claim 56, wherein an email address field in the configured received message is the message sender's email address associated with the host system.

58. (Previously Presented) A computer system as claimed in claim 57, wherein a reply-to email address field in the configured received message is the message sender's email address associated with the host system.

59. (Previously Presented) A computer system as claimed in claim 58, further

comprising a code added to the configured received message to make an indication to the message recipient.

60. (Previously Presented) A method for forwarding messages generated at a mobile client by a message sender destined for a message recipient, comprising the steps of:

receiving a message, generated at the mobile client by the message sender destined for the message recipient, at a forwarding component associated with a host system, wherein messages generated at the host system by the message sender use a first address;

configuring the received message such that the received message appears to the message recipient as if the received message originated at the sender's first address, wherein messages generated at either the mobile client or host system appear to originate at the message sender's first address; and

forwarding the configured received message to the message recipient.

61. (Previously Presented) A method as claimed in claim 60, wherein the message sender's first address is an email address associated with the host system.

62. (Previously Presented) A method as claimed in claim 61, wherein the configuring step ensures an address field in the configured received message is the message sender's email address associated with the host system.

63. (Previously Presented) A method as claimed in claim 62, wherein the configuring step ensures a reply-to email address field in the configured received message is the message sender's email address associated with the host system.

64. (Cancelled).

65. (Previously Presented) A computer readable medium encoded with software instructions for enabling a method of forwarding messages generated at a mobile client by a message sender destined for a message recipient, the method comprising the steps of:

receiving a message, generated at the mobile client by the message sender destined for the message recipient, at a forwarding component associated with a host system, wherein messages generated at the host system by the message sender use a first address;

configuring the received message such that the received message appears as if it were generated at either the mobile client or host system; and

forwarding the configured received message to the message recipient.

66-114. (Cancelled).
